**Objectives of the curricular unit and competences to be developed**

Portugal's role as a host of European entrepreneurship is recognized, with the presence of the Websummit and the dynamics of the Portuguese start-up ecosystem. Every year an increasing number of technology companies choose Portugal to open facilities or to host themselves and the demand for IT professionals exceeds the supply.

Thus, internship opportunities are numerous, involving start-ups, large national and international companies, or even more local/regional companies. The modalities cover fully face-to-face work, at the company's premises, mixed (with some days in person and others remotely) or fully remote (a modality that was adopted after the recent pandemic and that came to remain for some of the most innovative companies).

Recent and most popular areas of expertise for our students include programming, information systems, artificial intelligence, networks and operating systems, and cybersecurity.

**Minimum: 465 hours at a company**
